Overview

Agent Evaluation: Bridging the Gap to Production

Quality Blocker

Moving agents from cool demos to reliable software is stalled by evaluation.

Beyond Right or Wrong

Traditional tests: Simple PASS/FAIL.

Agents evaluation: Process over output.

How an agent arrives at a solution is more relevant.

Challenges to Cross

- **Non-Determinism:** Many valid paths. Efficiency matters.
- **Cascading Logic:** State matters. Small misses compound.
- **Manual Ceiling:** Manual logs don't scale.
- **Tool-Env Coupling:** Needs complex mock worlds.

Cool Agent Demo

Production Ready Software

Current Evaluation Methods

The Evaluation Gap

Challenges to build Agent Evaluation Sets

1. Defining "Golden" Multi-Step Truth

Authoring the complete sequence of expected agent actions, state changes, and forbidden paths.

2. Capturing Realistic Tool Interactions

Defining plausible, consistent mock responses for every tool call, including success and complex edge cases.

3. The Constant Threat of "Eval Drift"

Ongoing maintenance as tools update or logic changes, making existing examples invalid or trivial.

Can AI help us to evaluate agents?

"Evaluation Assistant" Vision

- Deep code analysis to understand tools and instructions
 - Creatively explore how an agent could be used and exploited
 - Accelerate the development cycle automating evaluation steps
- 

AgentFlux: Automated Evaluation Set Generation

AgentFlux automates the creation of rich evaluation sets by deeply analyzing agent implementation and potential interactions.

AgentFlux: CUJ Explorer Categories

Systematically exploring interaction types for comprehensive evaluation coverage.

From Blueprint to Benchmark: Inside the EvalSet Factory

How the EvalSet Generator turns abstract ideas and agent logic into concrete, executable test suites.

"EvalSet Generator takes abstract Critical User Journeys and grounds them in the reality of your agent's specific tools and instructions, creating ready-to-run test cases."

How to use AgentFlux

Generating Evaluation Sets

Effortless Generation, Tailored to Your Needs

Main Entry Point

Invoke the agentflux skill

Simply trigger the skill directly inside a Jetski session by providing your agent's path.

"Generate an eval set for `//path/to/my/agent` using AgentFlux."

Fully Automated or Human-Guided

AgentFlux can be executed as a zero-config standalone pipelines; or we can leverage Jetski to orchestrate its stages, allowing users to provide additional instructions, initial data and feedback.

Mode A: One-Shot Autonomous

"The Autopilot"

Best for: Rapid bootstrapping and setting up initial baseline coverage quickly.

How it works: AgentFlux reverse-engineers the codebase and outputs complete evaluation sets in minutes without needing human intervention.

Mode B: Iterative HITL "The Co-Pilot"

Best for: Complex agents, fine-tuning niche edge cases, iterative eval set curation.

How it works: Run independent stages (Profiling → Blueprinting → Eval Gen). Review outputs, provide feedback and refine.

Generating Evaluation Sets

AgentFlux delivers structured evaluation datasets designed for direct ecosystem integration

The Data (The "What")

Trajectory Eval Sets

`trajectory_eval_set.json`

Rigid, deterministic sequences. Protects against **functional regressions**.

Simulation Eval Sets

`simulation_eval_set.json`

Dynamic, fluid personas. Tests **behavioral robustness**.

The Rules (The "How")

Evaluation Configs

`*_eval_config.json`

The guardrails defining metrics, parameters, and custom scoring rubrics (accuracy, toxicity, etc.).

Ensures complete consistency between local runs and CI/CD.

Execution Platforms (Where)

Outputs are automatically shipped to generate rich Pass/Fail metrics and dashboard reports.

Target Ecosystems:

- Everest
- Latinum
- ADK Evals

Demo and Examples

A large group of men in dark suits, white shirts, and dark ties, all wearing dark sunglasses. They are standing in a line, looking forward with serious expressions. The background is slightly blurred, suggesting an outdoor setting with greenery.

we had AI agents in 1999

AgentFlux: Demo and Examples

User Conversation Scenario

Current Status, Limitations & Roadmap

Current status

- End-to-end multi-agent pipeline reverse-engineers agent code into executable tests.
- `agentflux` Jetski skill to orchestrate eval set generation and refinement.
- Outputs native ADK **EvalSets** and **EvalConfigs** (Data + Rules)
- Generates intermediate artifacts to support feedback and debugging

Current Limitations

- **State Dependency:** Complex initial session states still demand manual configuration.
- **Static Boundaries:** Deep wrappers can sometimes obscure logic from scanners.
- **Format Focus:** Currently optimized for text-based ADK/Orcas environments.

Roadmap & Active Frontiers

- **Platform Expansion:** Active development to generate configs for **Latinum** and broader support.
- **Jetski/Antigravity Harness:** Tighter integration for improved developer experience.
- **Beyond Text:** Multimodal EvalSets (Images, Video, Audio) and local harness execution.

Ongoing collaborations

PASS

Privileged Access Security Solutions

Focused on robust access management and infrastructure security.

Trust Scores & Agents

Dynamic risk assessment and agent-based monitoring for continuous trust evaluation.

Milestones

Hands On

Interactive Session

Follow these steps to run your first evaluation set generation:

1. **Open Jetski:** Access your active workspace and open a new chat.
2. **Copy Prompt:** Use the standardized trajectory evaluation prompt shown on the right.
3. **Execute:** Leave Jetski running in the background while it maps and generates your Agent's eval sets.
4. **Feedback:** [Help us to improve](#)

JETSKI PROMPT TEMPLATE

I want to generate a trajectory evaluation set for this following agent using the AgentFlux pipeline:

Target Agent:

google3/learning/agents/orcas/samples/buganizer/agent.py

Output Directory:

You can generate the output folder inside the provided target agent path

Please follow the agentflux skill instructions in
google3/abuse/ml/agents/ai_productivity/skills/

Hands On

[Provide a Feedback About Your AgentFlux Hands On Experience](#)

Thank you!
